

Overview

The **UART TO ETH** module provides an easy way to communicate between UART and Ethernet, it can be configured via web page.

Features

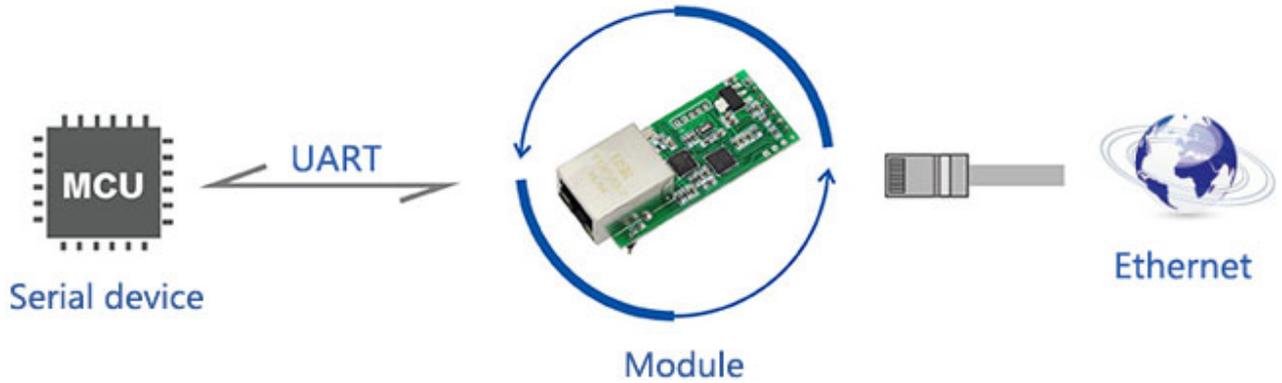

- M0 series 32-bit ARM processor, fast speed, high efficiency
- 10/100M Auto-MDI/MDIX ethernet interface, regardless of cross-over or straight-through cable
- Auto-reconnecting, provides a reliable TCP connection
- Supports time-out reboot (no-data reboot), configurable reboot time
- Flexible serial port data framing, allows kinds of customized packeting
- Baudrate configurable, from 600bps up to 460800bps, supports five parity check options: None, Odd, Even, Mark, Space
- Supports customized heartbeat packets, make sure the connection is truthful
- Supports customized registration packets, detect the connection status, customizable packet header, make the register packets with selected MAC address
- Supports customized web page, allows user to customize the module configuration page
- Supports RFC2217-like protocol, be able to communicate with devices whose serial setting (baudrate, data bit, etc.) may change
- Supports DNS domain name resolution, configurable DNS server
- Supports DHCP, auto-obtained IP or static IP
- Firmware is upgradable via the network
- Restore to factory settings via software and/or hardware
- Comes with default MAC address, which is customizable
- Available working modes: TCP Server, TCP Client, UDP Server, UDP Client, HTTPD Client
- Supported protocols: IP, TCP, UDP, ARP, ICMP, DHCP, DNS, HTTPD Client
- Configurable via web page, AT commands, serial protocol, and network protocol, provides configuration protocol which can be integrated to your own software
- Provided software: module configuration software, TCP/UDP testing tool, VCOM virtual serial port software
- Example code: host computer (socket), VB, C++, Delphi, Android, iOS, etc.

Specification

- Protection: built-in 1.5KV electromagnetic isolation
- Interface: 3.3V TTL (2.54mm pitch pinheader)
- Power supply: 3.3V DC or 5V DC (via different pin)
- Operating current: 150mA (avg)/160mA (max)
- Operating temperature: -25~75°C
- Power consumption: <1W
- Storage condition: -40~105°C, 5~95%RH
- Dimension: 50.5 x 22.6 x 15 (mm)

Application

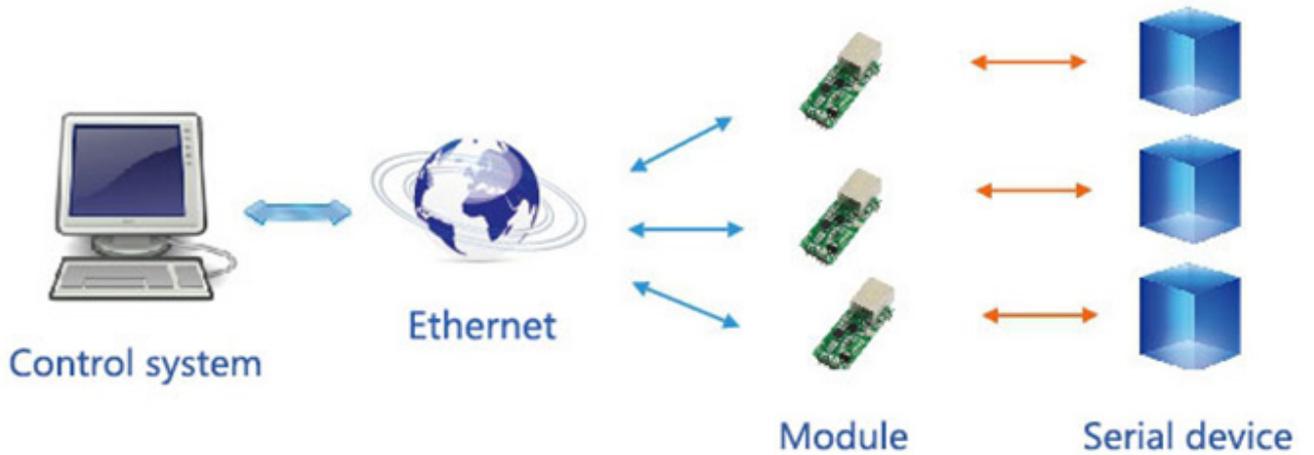

Bi-direction transparent transmission between TTL and wired Ethernet:

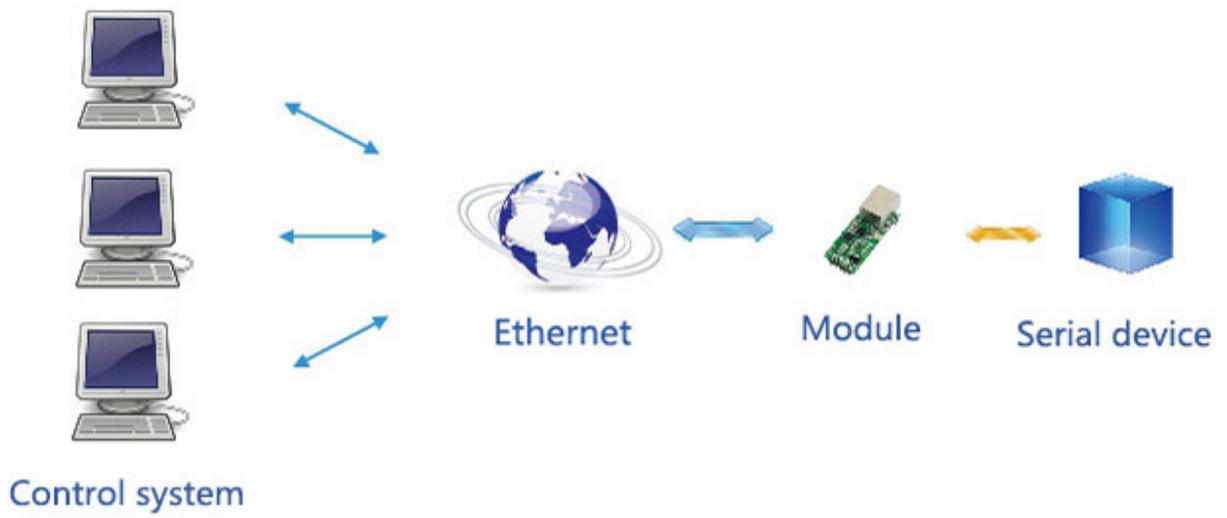

Extend the communication distance for serial devices:

Manage multi serial client devices remotely via one web server:

Manage serial server remotely via multi web clients:

Photos

While providing compatible software functions, there are two different hardware versions due to IC short supply, and they will be **delivered randomly**, we don't know in advance which one will be delivered for your order. Please make sure you don't mind it before placing order.

Selection guide

	RS485 TO ETH	RS485 TO ETH (B)	RS485 TO POE ETH (B)	RS232/485/422 TO POE ETH (B)	RS485 TO WIFI/ETH	RS232/485 TO ETH
--	--------------	------------------	----------------------	------------------------------	-------------------	------------------

ETHERNET					
RJ45 Ethernet	10/100Mbps auto-negotiation				
POE	-	supported		-	
WIFI interface	-		802.11b/g/n 2.4GHz	-	
UART					
Type	RS485		RS232/485/422	RS485 RS232+RS485 (allows concurrent operation)	
Baudrate	600bps~230.4Kbps	300bps ~ 115.2Kbps		300bps ~ 460.8Kbps 600bps~230.4Kbps	
Hardware flow	NOT supported			supported	
Data bit	5, 6, 7, 8				
Stop bit	1, 2				
Parity bit	None, Even, Odd, Space, Mark				
INTERFACE PROTECTION					
Power supply	reverse-proof, ESD protection, anti-surge				
Ethernet	1.5KV electromagnetic isolation				
RS485	2KV ESD protection, 2.2K Ω pull up/down registers	2KV anti-surge	600W anti-surge, lightningproof, anti-electrostatic 15KV	anti-surge, lightningproof, over-current protection	2KV ESD protection, 2.2K Ω pull up/down registers
Other	-	-	Power isolation, signal isolation protection	-	lightningproof, over-current protection
OPERATING MODE					
Type	TCP Server, TCP Client, UDP Server, UDP Client, etc.				
TCP Server	customizable 1~16 Clients	supports 30 Clients		supports 24 Clients	supports 2-ch Socket, 8 Clients per ch
MISC					

Features	customized heartbeat packets, customized registration packets, customized webpage, RFC2217-like protocol, KeepAlive, timeout auto reboot, short connection, firmware upgrade via network			
	-	Modbus gateway, MQTT/JSON to Modbus	Modbus gateway, MQTT, HTTP Client	Modbus gateway, Websocket (webpage to serial)
Configuration	Built-in webpage, Host computer config software, Serial commands			
Power supply	5~7V	9~24V	6~36V	5~36V
Operating current	110mA@5V	TBD	127mA@5V	86.5mA@5V
Operating temp.	-25 ~ 75°C	-40 ~ 85°C
